Aussie Primary Academy

Estimating and Measuring Angles — Year 5 Maths

Australian Curriculum v9.0 | AC9M5M04

LEARNING INTENTION

I can estimate, construct and measure angles in degrees using a protractor.

SUCCESS CRITERIA

☐ I can name angle types (acute, right, obtuse, etc.)
☐ I can estimate an angle before measuring
☐ I can use a protractor accurately

STRATEGY BOX

Angle types: **Acute** (less than 90°), **Right** (exactly 90°), **Obtuse** (between 90°–180°), **Straight** (exactly 180°), **Reflex** (more than 180°).

WORKED EXAMPLE

An angle measuring 45° is an **acute** angle, because it is less than 90°.

PART A — WARM UP

1. Name the angle type: 30°
2. Name the angle type: 90°
3. Name the angle type: 150°
4. Name the angle type: 200°

PART B — CORE SKILLS

5. Estimate the size of a slice of pizza cut into 8 equal pieces (full circle = 360°). What is each angle?
6. Use a protractor to measure 3 angles drawn by your teacher and record their sizes below.
7. Draw an angle of exactly 60° using your protractor.
8. Show your working for Question 5 below.

ANGLES HELPER

Line up the protractor's centre point on the angle's vertex (corner), with the baseline along one arm of the angle. Read where the other arm crosses the scale — make sure you read the correct scale (inner or outer)!

WORKING SPACE — PRACTICE ANGLES

Estimating and Measuring Angles — Year 5 Maths

Australian Curriculum v9.0 | AC9M5M04

PART C — CHALLENGE

9. Real-World Context: A skateboard ramp has an incline of 35°. Is this angle acute, right, or obtuse? Sketch what this might look like.

10. Reasoning: Two angles sit on a straight line and add up to 180°. If one angle is 110°, what is the other angle? Explain how you know.

REFLECTION

Today I learned…

____

I CAN CHECKLIST

☐ I can name different angle types
☐ I can estimate angle size
☐ I can measure angles with a protractor

TEACHER FEEDBACK

Strength: ______________________

Next Step: ______________________

PARENT TIP

Spot angles around the house — door hinges, clock hands, roof lines — and guess their size.

TEACHER TIP

Have students estimate before measuring — builds angle sense, not just protractor skills.

ANSWER KEY (FOR PARENT / TEACHER USE)

Q1: 30° = acute
Q2: 90° = right angle
Q3: 150° = obtuse
Q4: 200° = reflex
Q5: 360° ÷ 8 = 45° per slice
Q6: Teacher-supplied angles — check against protractor reading
Q7: Check student's drawn 60° angle for accuracy
Q8: Working shown as above
Q9: 35° is acute (less than 90°)
Q10: 180° − 110° = 70°; angles on a straight line always sum to 180°
