Measuring Angles with a Protractor

Year 5 · Mathematics · Measurement | B2 · Learn + Notice

Name: _____ Date: _____

LEARNING INTENTION

I can align a protractor and read the correct scale.

KEY IDEA

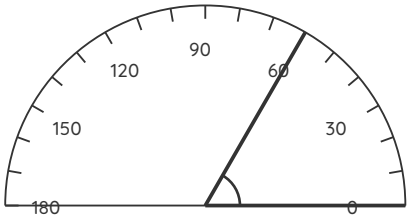
Centre at the vertex; baseline along one arm; start at that arm's 0°. Follow that scale to the other arm.

VOCABULARY

protractor · baseline · scale · degrees · vertex

LEARN IT: A Worked Model

The model starts at the right-hand 0° and reaches 60°. Estimate first: the opening is acute, so 120° cannot be correct.



Use the marked opening. Diagrams for calculation tasks are not drawn to scale.

SUCCESS CRITERIA

- ☐ I can align a protractor and read the correct scale.
- ☐ I can explain the benchmark, tool or angle rule I used.
- ☐ I can check my answer and correct a mistake.

NOTICE IT: Guided Practice

Measure each marked angle and name its type.

A.

Answer: _____

B.

Answer: _____

C.

Answer: _____

Measuring Angles with a Protractor

Year 5 · Mathematics · Measurement | B2 · Practise + Apply + Reason

PRACTISE IT: Independent Questions

Measure each marked angle and name its type.

If needed, extend an arm with a ruler. Keep the vertex and opening unchanged.

A.

Answer: _____

B.

Answer: _____

C.

Answer: _____

D.

Answer: _____

E.

Answer: _____

F.

Answer: _____

APPLY IT

Choose one acute and one obtuse practice angle. Describe how you placed the protractor and selected the scale.

EXPLAIN HOW YOU KNOW: Misconception Check

Ella reads 40° for a marked 140° angle. Both numbers appear at the same tick. Explain which reading fits the opening.

CHALLENGE: Reasoning Task

Rotate your paper and measure angle B again. Should the result change? Explain.

MY SELF-REVIEW

Circle one: I understand it / I need more practice / I need help

Measuring Angles with a Protractor

Year 5 · Mathematics · Measurement | B2 · Teacher Copy

ANSWER KEY: Guided + Independent Practice

Notice: A 40° acute; B 90° right; C 130° obtuse.

Practice: A 25° acute; B 65° acute; C 90° right; D 115° obtuse; E 145° obtuse; F 170° obtuse. Accept ±2° for physical measurement.

Apply: centre at vertex, baseline on arm, correct starting 0°.

Reason: 140° is obtuse; 40° uses the wrong scale.

Challenge: no, rotation preserves the angle; B remains 65°.

COMMON MISCONCEPTION

Starting from the wrong zero gives the supplementary reading. Estimate the angle type before reading.

TEACHER PROMPT

Ask: "Which opening are you using? What benchmark or angle relationship applies? How can you check your answer?"

NEXT-STEP GUIDANCE

Move to constructing and measuring reflex angles.

PRINTING AND ASSESSMENT

Print A4 at actual size (100%). Use a ruler and protractor. Accept ±2° for careful measurement and construction. Discuss estimates separately from measurement accuracy.
