

Year 3 Science: Heat and Temperature

Investigate heat sources and how heat can move between objects.

Name: _____

Date: _____

Learning Intention

I can identify heat sources and explain simple heat transfer.

Success Criteria

I can sort hot/cold examples, use safe science language, and explain temperature change.

A. Heat Sources

Tick the things that can be heat sources.

- ☐ Sun
- ☐ toaster
- ☐ ice cube
- ☐ campfire
- ☐ fridge
- ☐ warm hands

B. Hot, Warm or Cold?

Write hot, warm or cold.

1. soup just cooked: _____
2. water from the fridge: _____
3. towel in the sun: _____
4. ice block: _____

C. Explain

1. Why does a spoon feel warm in hot soup?

2. What happens when an ice cube sits in the sun?

3. Name one safe way to cool something hot.

D. Safe Science

Circle the safe choice.

1. Touch a hot pan / Ask an adult
2. Test hot water carefully / Splash it
3. Use oven mitts / Use bare hands

E. Challenge

Complete: Heat can move from a _____ object to a _____ object.

Answer Key: Heat and Temperature

Teacher/Parent Guide - Year 3 Science

Name: _____

Date: _____

Complete Answer Key

A. Tick: Sun, toaster, campfire, warm hands. Accept fridge only if student explains it releases warmth at the back, but it is not the expected answer.

B. 1 hot, 2 cold, 3 warm, 4 cold.

C. 1 Heat moves from the hot soup into the spoon. 2 The ice cube melts because it gains heat. 3 Leave it to cool, add cooler water when safe, or ask an adult.

D. 1 Ask an adult, 2 Test hot water carefully, 3 Use oven mitts.

E. hot/warm; cooler/cold.

Parent/Teacher Tip: Emphasise safety. Students should describe heat transfer without touching hot objects.
