

ACARA V9.0 · AC9M5N09 — Use mathematical modelling to solve financial and other practical problems

Learning Intention

I can plan a simple budget and check it balances.

Warm-Up

Find the fraction first.

$\frac{1}{4}$ of \$40 = \$_____

1. Pocket Money Plan

You get \$10 a week. You spend \$4 and save the rest.

How much do you save over 6 weeks?

.....

2. Excursion Budget

A \$150 budget covers \$90 for bus hire and the rest for entry tickets.

How much is left for tickets?

.....

3. Lemonade Stand

You spend \$12 on supplies and sell 30 cups at \$1 each.

What is your profit?

.....

4. Savings Challenge

You need \$50 for a gift and already have \$22.

How much more do you need to save?

.....

High Five Self-Check

Colour a star for each problem you solved on your own.

Extension Activity

Track your own (real or pretend) spending for a week and see if you stayed within a \$20 budget.

Parent / Teacher Tip

A simple two-column notebook (money in / money out) is a great low-tech way to practise budgeting skills learned in this worksheet.

Answers & Marking Guide

Warm-Up

\$10 ($\frac{1}{4} \times 40 = 10$)

Main Problems

1. **Pocket Money Plan:** \$36 ($10 - 4 = 6$, $6 \times 6 = 36$)

2. **Excursion Budget:** \$60 for tickets ($150 - 90 = 60$)

3. **Lemonade Stand:** \$18 profit ($30 \times \$1 = \30 , $\$30 - \$12 = \$18$)

4. **Savings Challenge:** \$28 more ($\$50 - \$22 = \28)

Marking Tip

Check that income minus expenses is calculated in the correct order — a common Year 5 error is subtracting in the wrong direction.
