

LEARN IT - SCIENCE IDEA

Seasons form a yearly pattern. In many parts of Australia, summer is usually warmer and winter cooler, but seasonal conditions differ across places.

Remember: Use usually, often or may because weather is not identical every day.

A. GUIDED SCIENCE THINKING

1. Name the four seasons used in many Australian calendars.

2. Which season comes after winter?

3. Why is hot weather not proof that it is summer?

B. INDEPENDENT PRACTICE

1. Match December to an Australian calendar season.

2. Match June to an Australian calendar season.

3. Name one common autumn change.

4. Name one common spring change.

5. Put the four seasons in a repeating order.

C. I CAN SHOW MY UNDERSTANDING

Choose one Australian location and describe two changes people may notice across two seasons.

Year 1 Science - Australian Seasons

Australian Curriculum v9 | AC9S1U02

D. INVESTIGATE OR APPLY

Create a four-season wheel. Add one likely environmental change and one everyday activity for each season.

My prediction:

What I observed / decided:

E. THINK LIKE A SCIENTIST

1. Which changes repeat each year?

2. Why might Darwin and Hobart have different seasonal patterns?

MY LEARNING REVIEW

☐ I can explain it.

☐ I need a little help.

☐ I need more practice.

I understood:

I found this difficult:

PARENT / CARER TIP

Talk about what your family notices locally. Use usually rather than always when describing a season.

COMPLETE ANSWER GUIDE

Guided	Summer, autumn, winter, spring; spring; a single day is weather, while a season is a longer pattern.
Practice	December-summer; June-winter; valid local changes; summer-autumn-winter-spring.
Independent	Two plausible, location-aware seasonal comparisons.
Investigation	Wheel includes four ordered seasons and sensible changes/activities.

TEACHER NOTES - EVIDENCE TO NOTICE

Success evidence: Recognises seasons as recurring patterns and describes location-aware changes.

Common difficulty: Using Northern Hemisphere months or claiming every Australian place has the same four-season pattern.

Next step: Compare local seasonal observations with an Aboriginal or Torres Strait Islander seasonal calendar from an appropriate local source.
