

LEARN IT - SCIENCE IDEA

A safe investigation follows ordered steps. Scientists make and record observations using senses safely, simple informal measures and digital tools when appropriate.

Remember: Follow the plan, change only what the plan says and record what actually happens.

A. GUIDED SCIENCE THINKING

1. Why should instructions be read first?

2. Which sense should never be used on an unknown substance?

3. Name one informal way to measure distance.

B. INDEPENDENT PRACTICE

1. Put predict, test, observe, record in order.

2. Circle the safe action: run after a rolling car / clear the path.

3. Write one observation about texture.

4. Record a length in hand spans.

5. Name one way a photo can support a record.

C. I CAN SHOW MY UNDERSTANDING

Write or draw four safe steps for observing how far a toy rolls.

Year 1 Science - Safe Investigations

Australian Curriculum v9 | AC9S1I02 / AC9S1I03

D. INVESTIGATE OR APPLY

With an adult, roll one toy on a clear floor. Mark the start, use equal paper strips to measure, record the count and take a photo only if appropriate.

My prediction:

What I observed / decided:

E. THINK LIKE A SCIENTIST

1. Which procedure helped keep the test safe?

2. Was the observation a fact or an opinion? Explain.

MY LEARNING REVIEW

☐ I can explain it.

☐ I need a little help.

☐ I need more practice.

I understood:

I found this difficult:

PARENT / CARER TIP

Adult supervision matters. Praise careful following of steps and honest recording, even when the result is unexpected.

Year 1 Science - Safe Investigations

Australian Curriculum v9 | AC9S1I02 / AC9S1I03

COMPLETE ANSWER GUIDE

Guided	To understand and follow the safe procedure; taste; blocks, footsteps or paper strips.
Practice	Predict-test-observe-record; clear the path; objective observations vary; photo preserves visible evidence.
Independent	Four ordered steps include clear space, start point, observation and record.
Investigation	A safe procedure and a recorded informal measurement.

TEACHER NOTES - EVIDENCE TO NOTICE

Success evidence: Follows a safe procedure and records an observable result using an appropriate method.

Common difficulty: Writing what was expected instead of what was observed.

Next step: Repeat and record results in a simple table.
