

Learning Intention: I can interpret and create simple maps showing where objects are in relation to each other.

Success Criteria — I can:

- Explain what a bird's-eye view map shows.
- Locate landmarks on a simple map using position words.
- Create my own simple map of a familiar place.

Strategy Box — Position Words

A **bird's-eye view** is what you would see looking straight down from above — like a bird flying over. Maps use this view with simple shapes instead of a photo. Use position words to describe where things are: **next to, between, near, far from, in front of, behind, left of, right of.**

Worked Example — Our Classroom (Bird's-Eye View)

1. The **Teacher's Desk** is near the door, at the front of the room.
2. The **Bookshelf** is next to the window.
3. The **Student Tables** are between the Teacher's Desk and the Reading Corner.
4. The **Reading Corner** is in the back-right of the room, far from the door.

Review: Reading a Map

Maps use simple shapes as symbols for real objects (a rectangle for a desk, a circle for a pond). Always check for a **key** if one is provided, and look at where each symbol sits **relative to** the others.

Try It

Look at the classroom map. What is directly next to the Teacher's Desk? _____

Parent Tip

Ask your child to draw a simple bird's-eye view map of your lounge room or backyard, labelling 3–4 objects. Talk about where things are positioned relative to each other using words like "next to" and "between".

Key Vocabulary

Word	Meaning
Bird's-eye view	Looking straight down at something from above
Landmark	A notable object or feature used to help locate position
Relative position	Where something is compared to another object

Build Skills — Read, follow and create maps.

Q1 — Read the Park Map

- What is near the Playground? _____
- Which landmark is between the Playground and the Picnic Area?

- Is the Gate near or far from the Pond? _____
- What is directly below the Playground on the map?

Q2 — Follow the Path

Using the park map above, describe a path from the **Gate** to the **Playground**. Use position and direction words (e.g. "walk past the Pond, then...").

Q3 — Create Your Own Map

Draw a simple bird's-eye view map of your bedroom or the school playground. Label at least 4 objects or landmarks, and show their position relative to each other.

Watch Out!

A map is not a photo — it shows a simplified, top-down view. Don't try to draw objects in 3D or from the side; use simple flat shapes viewed from directly above.

Q4 — True or False?

Using the park map above, circle True or False for each statement.

Statement	True / False
The Playground and the Pond are in the top row of the map.	True / False
The Picnic Area is directly above the Gate.	True / False
The Pond is closer to the Gate than the Playground is.	True / False

Apply & Reasoning — Use what you know to explain your thinking.

- 1 Reasoning:** Why is a bird's-eye view more useful than a normal photo for showing the layout of a park or classroom?

- 2 Reasoning:** Look back at the park map on Page 2. Explain the best path from the Picnic Area to the Pond, and why you chose that path.

- 3 Open-ended:** Design a simple treasure map with at least 3 landmarks and a hidden treasure. Write 2–3 clues using position words that would help someone find the treasure.

Quick Check — Exit Ticket

In one sentence, explain what "bird's-eye view" means.

Answer & Teacher Support

Answer Key — Pages 1 & 2

Try It (p1): The door is directly next to/near the Teacher's Desk.

Q1 (p2): a) The Playground is near the Pond (top row). b) The Pond is between the Playground and (roughly across from) the Gate; accept reasoning that references relative position. c) The Gate is far from the Pond (opposite corners). d) The Picnic Area is directly below the Playground.

Q2 (p2): Accept any description that correctly moves from the Gate, past or near the Pond, to the Playground, using at least one position/direction word.

Q3 (p2): Accept any bird's-eye view map with at least 4 clearly labelled objects and their relative positions shown accurately.

Q4 (p2): 1) True (Playground and Pond are both in the top row). 2) False (Picnic Area is directly below the Playground, not above the Gate — they're in the same row). 3) True (Pond and Gate share a column, closer than Playground to Gate).

Answer Key — Page 3

Q1: A bird's-eye view shows the whole layout and how things relate to each other at once, which a photo (taken from the side) usually can't show clearly.

Q2 (acceptable-answer guide): Accept any path description that logically connects the Picnic Area to the Pond using the map's layout and at least one position word.

Q3 (acceptable-answer guide): Accept any treasure map with 3+ landmarks and clues that use position language accurately and would genuinely help someone locate the treasure.

Exit ticket: Looking straight down at something from above, like a bird flying over it.

Teacher Checklist

- ☐ Explains what a bird's-eye view map shows.
- ☐ Reads and locates landmarks on a given map.
- ☐ Describes a path using position/direction language.
- ☐ Creates an original map with accurate relative positions.
- ☐ Evaluates true/false statements about a map's layout.
- ☐ Uses position words correctly in written reasoning.

Teacher Tip

Watch for students who draw objects side-on (like a house drawing) rather than from directly above — model the difference explicitly with a real object viewed from above before independent map-making.
