

ACARA V9.0 · AC9M2N06 — Solve practical additive & multiplicative problems including money transactions

Learning Intention

I can use pictures and grouping to solve addition, subtraction and simple multiplication stories.

Warm-Up

Count the groups first.

3 groups of bees = bees

1. Egg Cartons

4 cartons with 6 eggs each. 5 eggs break.

How many whole eggs are left?

2. Bike Race

18 riders start. 7 riders finish early.

How many riders finish the full race?

3. Muffin Trays

3 trays with 8 muffins each.

How many muffins altogether?

4. Fish Bowls

5 bowls with 4 fish each. 2 fish are moved to a new bowl.

How many fish stay in the original bowls?

High Five Self-Check

Colour a star for each problem you solved on your own.

Extension Activity

Draw a picture story using groups of 3 or more objects for a friend to solve.

Parent / Teacher Tip

At Year 2, encourage children to draw groups (arrays) rather than single tally marks — this builds the bridge from addition into multiplication.

Answers & Marking Guide

Warm-Up

6 bees ($3 \text{ groups of } 2 = 6$)

Main Problems

1. **Egg Cartons:** 19 eggs ($4 \times 6 = 24$, $24 - 5 = 19$)

2. **Bike Race:** 11 riders ($18 - 7 = 11$)

3. **Muffin Trays:** 24 muffins ($3 \times 8 = 24$)

4. **Fish Bowls:** 18 fish ($5 \times 4 = 20$, $20 - 2 = 18$)

Marking Tip

Accept skip counting, repeated addition, or grouping diagrams as valid working for the multiplication-style problems.
