

LEARNING INTENTION

I can solve practical money problems by choosing the right operation.

SUCCESS CRITERIA

- ☐ I can calculate totals and change
- ☐ I can solve multi-step money problems
- ☐ I can choose the right operation for the situation

STRATEGY BOX

Read the problem carefully: are you adding costs, finding change (subtracting), or finding a total for multiple items (multiplying)? Underline the key numbers first.

WORKED EXAMPLE

3 drinks at \$2.50 each. Total cost?

$$3 \times \$2.50 = \textbf{\$7.50}$$

PART A — WARM UP

1. You buy a book for \$12.50 and a pencil case for \$6.20. What is the total?
2. You pay with a \$20 note for an \$14.75 item. How much change do you get?
3. 4 muffins cost \$3 each. What is the total cost?
4. Round \$7.85 to the nearest dollar.

PART B — CORE SKILLS

5. A toy costs \$24.99. If it's on sale for \$5 off, what's the new price?
6. You have \$50. You buy 3 items at \$12.50 each. How much money is left?
7. Split a \$36 pizza bill evenly between 4 friends. How much does each person pay?
8. Show your working for Question 6 below.

MONEY HELPER

Estimate first: round prices to the nearest dollar to check your answer makes sense. **Change:** subtract the cost from the amount paid. **Splitting a bill:** divide the total by the number of people.

WORKING SPACE

PART C — CHALLENGE

9. Real-World Context: Maya is saving for a \$85 scooter. She has saved \$32 and earns \$8.50 per week from chores. How many more weeks does she need to save?

10. Reasoning: Explain why it's important to estimate the total cost of your shopping BEFORE you get to the checkout, using an example.

REFLECTION

Today I learned...

I CAN CHECKLIST

- ☐ I can calculate totals and change
- ☐ I can solve multi-step money problems
- ☐ I can choose the right operation

TEACHER FEEDBACK

Strength: _____

Next Step: _____

PARENT TIP

Let your child handle the calculator at the shops and estimate change before you pay.

TEACHER TIP

Set up a class "shop" with price tags for hands-on practice with multi-step money problems.

ANSWER KEY (FOR PARENT / TEACHER USE)

Q1: $\$12.50 + \$6.20 = \$18.70$

Q2: $\$20 - \$14.75 = \$5.25$

Q3: $4 \times \$3 = \12

Q4: $\$7.85 \approx \8

Q5: $\$24.99 - \$5 = \$19.99$

Q6: $\$50 - (3 \times \$12.50 = \$37.50) = \12.50

Q7: $\$36 \div 4 = \9 per person

Q8: Working shown as above

Q9: $\$85 - \$32 = \$53$ needed; $\$53 \div \$8.50 \approx 7$ weeks (rounding up)

Q10: Accept reasoned answer — estimating avoids surprises if you don't have enough money
