🎒 Back to School 2027 Warm-Up

Name: _____ Date: _____

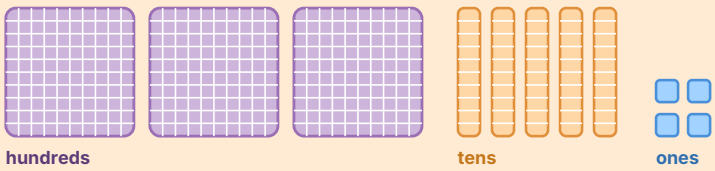

LEARNING INTENTION

I can partition, rearrange and rename two- and three-digit numbers, and explain the job that zero does in place value.

I CAN…

- ✓ partition a number into hundreds, tens and ones
- ✓ rename a number in different ways
- ✓ explain what zero does in a number

KEY STRATEGY AND WORKED EXAMPLE

354 = 3 hundreds + 5 tens + 4 ones = 300 + 50 + 4. You can also rename it: **354** = 35 tens and 4 ones, or 2 hundreds, 15 tens and 4 ones.

Zero is a place holder. In 305 there are 3 hundreds, **0 tens** and 5 ones. Without the zero, it would look like 35!

A. TRY TOGETHER – USE THE STRATEGY

1. 482 = ____ hundreds ____ tens ____ ones
2. 600 + 30 + 9 = _____
3. 507 = 500 + ____ + 7
4. Which digit is in the tens place in 825? _____
5. How many tens are in 270? _____
6. 715 = 700 + _____ + 5

B. CORE PRACTICE – SHOW YOUR THINKING

7. Write the number: 4 hundreds, 0 tens, 6 ones _____
8. Write the number: 2 hundreds, 5 tens, 9 ones _____
9. 3 hundreds, 12 tens and 5 ones = _____
10. Rename 360 as tens: ____ tens
11. Order from **smallest to largest**: 408, 480, 84, 804

_____

12. Circle the number with **6 tens**: 635 563 356 306

_____

C. CHALLENGE – REASON AND EXPLAIN

13 Use the digits **2, 0 and 7** once each. Make the **largest** and the **smallest** 3-digit number you can. Why can the smallest number not be 027?

14 **Error Analysis.** Mia wrote "four hundred and six" as 4006. What mistake did she make? What should she have written, and what does the zero do?

15 Noah has **2 hundreds, 14 tens and 3 ones** in his blocks. Mia says it is the same as 343. Is she right? Show how you know.

Watch Out! A zero cannot be left out. It holds a place so every other digit stays in its correct column.

💡 **Parent Tip:** Use real things at home: 10 straws in a rubber-band bundle make a "ten", single straws are "ones". Ask your child to show a number like 36, then 306, and talk about what is different.

🎯 My Term 1 Goal: This term I want to get better at _____

Answer and Teacher Page

Australian Curriculum v9.0 · Year 3 Maths

AC9M2N02

🎒 Back to School 2027 Warm-Up

Name: _____ Date: _____

ANSWERS

1. 4 hundreds, 8 tens, 2 ones

2. 639

3. 0 (500 + 0 + 7)

4. 2

5. 27 tens

6. 10 (700 + 10 + 5)

7. 406

8. 259

9. 425 (300 + 120 + 5)

10. 36 tens

11. 84, 408, 480, 804

12. 563

13. Largest 720, smallest 207. 027 is not a 3-digit number because the zero in the hundreds place means there are no hundreds.

14. Mia wrote an extra zero, so 4006 is four thousand and six. Correct: 406. The zero holds the tens place, showing there are 0 tens.

15. Yes. 200 + 140 + 3 = 343. 14 tens can be regrouped as 1 hundred and 4 tens.

TEACHER NOTES

Common misconception: leaving out the zero or adding an extra one when writing numbers from words (for example 4006 for four hundred and six). Return to place value blocks or a place value chart.
Support: use real base-ten blocks or the picture on page 1 for questions 1 to 10.
Challenge marking: Q13 look for 720 and 207 plus the idea that zero cannot be the first digit. Q14 mentions an extra zero and the empty tens place. Q15 shows 200 + 140 + 3 or regrouping tens into a hundred.
Australian Curriculum v9.0: AC9M2N02 (Year 2 review): partition, rearrange, regroup and rename two- and three-digit numbers, and recognise the role of zero in place value.
