

Angles as Turns and Right Angles

AC9M3M05 | Australian Curriculum v9.0

Name: _____

Date: _____

Learning Intention

I can identify angles as measures of turn and compare them with a right angle in drawings and everyday situations.

Strategy Box: Use a Right-Angle Benchmark

A right angle is a quarter turn. Use the corner of a square or piece of paper.

Compare: smaller than a right angle | equal to a right angle | larger than a right angle

The length of the arms does not change the angle size.

Worked Example - Compare the Turn

This is a right angle: a quarter turn.

A square corner is a useful benchmark.

A. Warm Up - Classify Each Angle

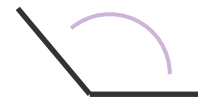

1

smaller / right / larger

2

smaller / right / larger

3

smaller / right / larger

Picture Practice - Turns

P1. Match each turn to its description.

Quarter turn

180° direction change

Half turn

90° direction change

Three-quarter turn

270° direction change

Quick check: Compare the opening, not the arm lengths.

Angles as Turns and Right Angles

AC9M3M05 | Australian Curriculum v9.0

Name: _____

Date: _____

B. Build Your Skills - Everyday Angles

4. Corner of a book: smaller / equal / larger than a right angle

5. Slightly open scissors: smaller / equal / larger than a right angle

6. Wide-open door: smaller / equal / larger than a right angle

7. Clock hands at 3:00: smaller / equal / larger than a right angle

C. Draw and Compare

8. Draw an angle smaller than a right angle.

9. Draw an angle larger than a right angle.

10. Draw a right angle and mark the square corner.

D. Apply It - Reason About Turns

11. A robot faces north and makes a quarter turn clockwise. Which direction now?

Answer: _____ Explain: _____

12. Priya says a longer arm makes a larger angle. Is she correct? Explain.

Angles as Turns and Right Angles - Answer Key

AC9M3M05 | Australian Curriculum v9.0

Learning check

Look for comparison with a right-angle benchmark and reasoning about the opening.

A. Warm Up and Picture Practice

1. Smaller than a right angle.
2. Equal to a right angle.
3. Larger than a right angle.

P1. Quarter = 90° ; half = 180° ; three-quarter = 270° .

B. Everyday Angles

4. Equal. 5. Usually smaller. 6. Usually larger. 7. Equal.

C-D. Draw, Compare and Reason

- 8-10. Drawings vary; compare each opening with a square corner.
11. East. A clockwise quarter turn from north points east.
12. No. Angle size depends on the amount of turn/opening, not arm length.

Teacher feedback checklist

- ☐ Identifies a right angle
- ☐ Compares openings
- ☐ Understands quarter turns
- ☐ Draws valid examples
- ☐ Uses direction words
- ☐ Explains reasoning
