

Aussie Primary Academy | Australian Curriculum v9.0 | Learn, Investigate and Explain

Name: _____

Date: _____

LEARNING INTENTION	communicate questions, methods, data and explanations clearly for a chosen audience
KEY IDEA	A scientific communication states the question, summarises a repeatable method, represents data honestly and links the conclusion to evidence. Detail and vocabulary change with audience, but accuracy does not.
WORKED MODEL	Use the inquiry cycle: question -> prediction -> safe method -> observations/data -> evidence-based conclusion -> evaluation -> communication.

SUCCESS CRITERIA - I CAN☐ use the inquiry skill ☐ record evidence clearly ☐ evaluate quality ☐ explain a next step**A. BUILD THE SCIENCE IDEA**

1. Put report sections in order: conclusion, question, results, method, prediction.

2. Match table, column graph, labelled diagram and oral explanation to useful purposes.

3. Identify missing labels, units and source information in a sample result.

B. APPLY AND EXPLAIN

4. Turn method notes into clear numbered steps.

5. Write a caption that explains what a result display shows.

6. Replace words such as proved and always with evidence-proportionate language.

C. INDEPENDENT CHECK

7. Draft a 60-word results-and-conclusion paragraph using two values.

8. Adapt it for a younger audience without removing the evidence.

Aussie Primary Academy | Australian Curriculum v9.0 | Application, Reasoning and Self-Review

Name: _____

Date: _____

D. APPLY SCIENCE IN CONTEXT

9. Scenario: report a fair test comparing how different materials slow the cooling of warm water

10. Plan a one-page report with question, method, display, finding and limitation.

11. Choose one visual representation and specify title, labels, scale and units.

E. REASON, EVALUATE AND TRANSFER

12. Evaluate a poster that is attractive but omits method and units.

13. Write a peer-feedback note containing one strength, one evidence-based concern and one specific revision.

F. STUDENT REVIEW - SHOW WHAT YOU UNDERSTAND

[] I can communicate questions, methods, data and explanations clearly for a chosen audience.

Circle one: independently | with one reminder | with support

Evidence from my work that proves I understand: _____

The most difficult science idea was _____ because _____

One correction or improvement I made: _____

A question I still have: _____

Aussie Primary Academy | Australian Curriculum v9.0 | Teacher Copy - Answers and Teaching Support

Accept equivalent responses when the student uses accurate science ideas, relevant evidence and clear reasoning.

COMPLETE ANSWER KEY

1. Question -> prediction -> method -> results -> conclusion.
2. Table=exact values; graph=pattern/comparison; diagram=structure/process; oral=explain/respond.
3. Add descriptive title, variables, units and data source/trials.
4. Steps need quantities, equipment, sequence and measurement points.
5. Caption states the main pattern with context.
6. Use suggests, supports or under these conditions.
- 7-8. Both versions retain accurate values and causal caution.
- 9-11. Report must be traceable and visual conventions complete.
12. Design cannot replace evidence or repeatability.
13. Feedback should be respectful, specific and actionable.

TEACHER CHECK AND NEXT STEP

[] Uses accurate vocabulary and a complete cause-and-effect explanation.

[] Supports conclusions with observations or data.

Next step: revisit one misconception, then transfer the idea to a new example.

COMMON MISCONCEPTION / WATCH OUT

A colourful poster is not automatically an effective science report.

Changing language for an audience must never change the result or certainty.

EXTENSION AND RE-TEACH

Re-teach: model one difficult item, complete one together, then ask the student to explain an independent correction.

Extension: apply the science idea to a new real-world example and justify the explanation with observations or data.
