Materials & Properties

Look, Talk & Explore

FOUNDATION Science

AC9SFU03 | Objects, materials and observable properties.

Name: _____
Date: _____

Learning Intention: I can name materials and describe what I notice.

I can ...

- [ ] name a material.
- [ ] describe how a material feels.
- [ ] find two materials in one object.

Words to say

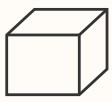
object
a thing, such as a spoon

material
what an object is made of

property
something we can notice

See It: An Object and Its Material

THIS WOODEN BLOCK



Object: block
Material: wood
It feels hard.

THIS COTTON CLOTH

Object: cloth
Material: cotton fabric
It feels soft.

NOTICE + TALK ABOUT IT

Wood is a material. A block is an object.
Can two objects be made from the same material?
Look around and tell an adult what you find.

Adult: Use safe, clean objects. Let your child look and touch gently.
Do not taste materials or use sharp, hot or breakable items.

Adult: Read aloud. Children may point, circle, draw or tell you.

Use a metal spoon, paper sheet, cotton cloth and wooden block.

A. Match the Material

1. Draw a line to match each object.

spoon	paper
sheet	metal
block	wood

B. Look and Feel

2. Gently touch the cotton cloth.
Circle a word that fits.
soft hard
Tell an adult another word.

C. Compare Materials

3. Gently bend the paper.
Gently try to bend the wood block.
Which bends more easily?
Circle one.
paper wood block

D. Fix the Idea

4. Ava says, "A spoon is a material."
Is that right? Point and say:
The object is a _____.
It is made of _____.

E. More Than One Material

5. Find a shoe with fabric on top and a rubber sole. Point to both materials.

F. Draw + Describe

6. Draw one object you explored.
Tell its material and one property.

My Self-Review

☐ I can show it. ☐ I am still learning. ☐ Please help me.

My discovery: _____

Answers + Acceptable Guidance

1. Spoon -> metal; sheet -> paper; block -> wood. These answers refer to the specific objects supplied, not all spoons, sheets or blocks.

2. Soft is a typical answer for a cotton cloth. Accept supported observations such as flexible, smooth or rough, depending on the actual cloth.

3. The paper sheet usually bends more easily than a solid wooden block. Describe the specific samples used, rather than all paper and wood.

4. No. Spoon is the object name. The supplied spoon is made of metal. A different spoon may be made of wood or plastic.

5. Check the actual shoe beforehand. The child points to the fabric upper and rubber sole. Accept other accurately identified materials if you use a different shoe.

6. Accept a drawing or adult-labelled marks plus an accurate material name and observable property, such as a metal spoon that is hard or smooth.

Page 1 - NOTICE: Yes. A wooden spoon and wooden block are different objects made from the same material. Accept examples checked against real objects.

Misconception Support

Misconception	What to explain	Prompt to try
Object and material mean the same thing.	An object is a thing. A material is what it is made from.	What is it? What is it made of?
All objects have one material.	One object may combine several materials.	Can you find two materials on this shoe?
All samples feel the same.	Properties vary with the sample and how it is made.	What do you notice about this piece?

Parent / Teacher tip: Read aloud and record oral answers. Use the named samples and check the shoe materials before starting. Encourage looking and gentle touching. Do not force children to use a texture they dislike.

Next step: Find two objects made of the same material. Compare one observable property using language such as hard, soft, smooth, rough, stiff or flexible.

Curriculum scope: AC9SFU03 recognises that objects can be made of different materials and describes observable properties. This set uses direct observation and includes an object with more than one material.
